

Associate of Applied Science: Family History Research

Degree Description:

This degree provides students with an advanced understanding of family history research principles and practices. Students will learn advanced techniques define a research problem, develop a research plan, gather information from documents, analyze evidence, and write conclusions. Students will use recognized professional standards and a variety of tools to complete research projects. They will be prepared to apply these research skills to various geographic specialty areas. This degree prepares students for professional work in the genealogical field. This degree is developed and granted by BYU-Idaho.

There are no changes to this degree for April 2019. The degree will remain in the online portfolio as it is until the proposed changes for April 2020 take place.
